

AC S.A.

AC SA is a Polish leader and also an important world's manufacturer of automotive LPG/CNG systems under STAG brand. AC SA has been operating on the Polish automotive market for more than 30 years and currently it has been the largest company in the segment of gas installations in Poland. According to its own estimates, AC SA has more than 50% share in the Polish market.

The products offered by AC SA are delivered to more than 40 countries all over the world. AC SA offers more than 200 autogas products, including controllers for LPG/CNG systems which account for the largest part of the offering. The flagship element of the sales offer of the company is a series of products under the STAG brand, being perhaps the most recognisable and most frequently purchased brand of electronic components for gas automotive systems in the market. Many of the solutions applied in this brand have marked pioneering ones on the global scale. As one of the first companies in the world began selling on a large scale of LPG for cars with diesel engines.

Our undisputed leadership in the field of environmentally friendly alternative fuel systems for motor vehicles is a result of the natural synergy of decades of experience and professional expertise. To further strengthen this mutual interaction, AC S.A. opened the Research & Development Centre, where, apart from ongoing work on prototypes, the work on new projects is undertaken to improve manufacturing process and the quality of existing products.
